Instructions:

1. Take the position at the counting gate (line which is defined on the counting gate map)
   Your counting position should be the same for all counting times (morning, lunch, evening) and should be as close to the one defined on the map as possible.
2. Take a picture of the environment
   (Use any device, the idea is to see what is happening)
3. Fill out the date and starting time of the counting session
4.
5. Counting:
   You are supposed to count all pedestrians and cyclist who pass the imaginary line in any direction and through its whole length (both sides of the streets).
   Count only person older than 10 years
   Draw single line in the counting sheet for every person who passed by. If organized group is passing by, write down the size of the group as a number (You consider organized group if more than 5 persons are led by someone or following the same route, e.g. tourist group, demonstration etc.)

6. Stop the counting after 15 minutes after the start. Not longer, not less!
7. Please take short note if something special is going on what influence the pedestrian and cyclist flow (e.g. construction site, demonstration etc.)
8. Move to the next counting location in the set.
   (If your are for example counting the set “C” and your location is “C4” you should move next to “C5”)
